Open to a permanent role

Berlin · remote in the EU · hybrid

Open to talk now · start within three months

German (native) · English

€55–70k, depending on scope

AI product engineer with seven systems in production, each built alone: apps in both stores, a multi-tenant restaurant SaaS with statutory fiscal signing, a learning platform, an autonomous agent. Over 5,100 commits since March 2026, alongside a full-time job. Self-taught in software development since 2022. Focus: agent-assisted development with strict verification discipline: a green test run is not proof.

## PROJECTS

**Salati** Live in both stores · 2026 4 device classes · 14 languages · 100% AI runs on the device · over 1,100 commits

Prayer and Quran platform for German speakers, with AI that runs offline. **Speech recognition for Quran recitation:** The memorisation mode has to hear whether a verse was recited correctly.

**MenuCloud Berlin** Live in production · 2026 1,279 API routes · 816 DB migrations · 7,800+ test cases · EU hosting & data residency

Multi-tenant SaaS for restaurants, including statutory fiscal signing. **Fiscal signing as a tenancy problem:** A signing unit is not simply an API call.

**WohnungsJäger** In personal use · 2026 4 portals watched · 24/7 scanning · 2 review stages before sending

An autonomous agent that reads the Berlin rental market faster than a human can. **An agent that does not act unasked.** What makes such a system appealing is also its risk: a bot sending applications with real personal data can do real damage.

**NOURI** Live on Google Play, iOS in review · 2026 11,892 recipes in the catalogue · 62 tables · 15 migrations · 538 tests

Nutrition and training platform: web app, mobile app, one shared catalogue. **A number nobody recomputes is a made-up number:** A catalogue of 11,892 recipes invites you to simply write the calories and macros down.

**BitDojo** Web live, apps in review · 2026 111 lessons · 813 cards to revise · 664 exam questions · 147 tests

German-language learning platform with exactly one lesson library. **Content errors are silent:** A typo in code breaks the build.

**Dartile** Web live, apps in review · 2026 284 tests · 8 game types · 350 call-outs, two languages · 0 dependencies in the engine

A darts counter that records every single dart. **The camera suggests, it does not assert:** Detection with a phone camera lands around 95 per cent in the field.

**LexiPulse** Web live, iOS in review · 2026 309 tests · 6 import formats · 0 documents on a server · 2 platforms, one core

An RSVP reader for EPUB, PDF and web articles, offline and open to read. **The same pace for every word is the mistake:** Flat RSVP gives a three-letter article the same time budget as a sentence boundary, and that is exactly where comprehension collapses.

## FOCUS AREAS

- Frontend & product**  
React / Next.js App Router · React Native / Expo · TypeScript · Motion & interaction
- Backend & data**  
Postgres / Supabase · API design · Payments · Multi-tenancy
- Cloud, delivery & operations**  
Vercel / edge · Docker / Coolify / Hetzner · CI/CD · Store delivery
- AI integration**  
Agent orchestration · On-device inference · RAG & retrieval · Prompt engineering

## PATH

- since April 2026  
**Founder & sole developer** · MenuCloud, sole proprietorship, Berlin
- since 2022  
**Software engineering, self-taught** · Meta (Coursera) · Udemy · own projects
- Self-taught in software development: no degree, no bootcamp. The evidence is seven systems in production.
- PUBLISHED  
verified-done · cron-last-due · whisper-ggml-header · arabic-normalize · darts-checkout: all with tests, CI and an MIT licence on github.com/DomenicMoran
